

"The webwindow to your organisation"

Nowadays, we can not imagine a world without the internet anymore. A website represents your company and should therefore be more than just a product sheet. Let your company's website be the key to further development of your business. Metaware enriches your internet- application with IBM Lotus web technology.

CMware offers the total solution for publishing your company's data online.

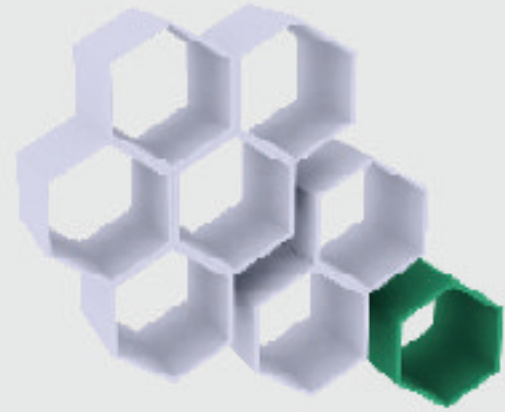

What is a content management system?

A content management system is a web-application that enables people to publish documents and data online, without the need of much technical knowledge. The name CMS is also used, as abbreviation of content management system.

CMS is especially applicable for websites with a frequently changing content and for websites that use a standard lay-out to present the content to visitors. Most companies use a CMS for their website now.

Websites are seen as an extension piece of companies. The company's identity, approaching customers and different market segments as well as communication with employees can all be found in a website. Whether you prefer a businesslike, modern or casual website; we will make sure the design of your future website is in accordance with your personal demands.

CMware is a content management system (CMS) that enables you to easlily publish documents and data online without the need of much technical knowledge. We will build the website for you and you can manage the content yourself.

cmware

Modules CMware

I. CMware consists of the following standard modules:

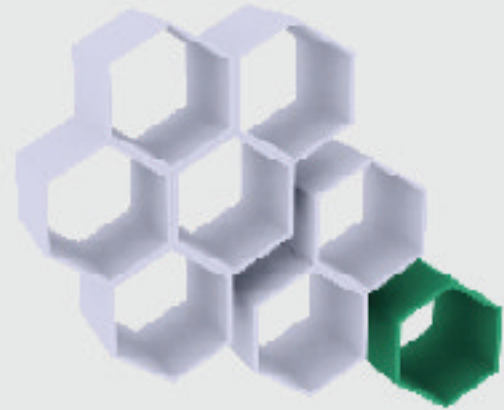

- a sheltered administration module, where data can be imported, deleted or adjusted
- a database for the storage of data
- a presentation module, where imported data can be viewed

II. Other modules can be added:

- a log-in module for visitors, in case access is not allowed for anonymous visitors
- an administration module, for authorized users (and administrators) data
- an administration module for presentation templates
- a module to show personal information to visitors
- an e-commerce module to make articles that can be shown on several pages
- a module that enables authorized visitors to react
- a module to save and process photos
- a module that has an agenda
- a module for email newsletters
- form-engine

Lotus Notes / Domino

Isoware exploits the power of Lotus Notes / Domino, the world's standard for all your intranet solutions.

CMware: part of the 'ware'-concept

The success of any organization is largely determined by the availability of current company information and experiences of employees. This supports organizations in their road to success and in the drive to compete. Isoware, as one of the Metaware applications fits within this concept. Apart from CMware, Metaware offers various other solutions with products such as Biware (call management) or Infoware (information management). The various modules fit within an integrated quality and document management system, the so-called Quality Suite.

More than software: the organization is the key

Our years of experience in realising solutions for quality management systems, supports our idea that the organization itself is the key to successful implementation of our products, both our standard applications and our custom-made applications. For maximum results in the interaction between software and organization, Metaware has developed a convenient pilot method. Over a short period of time, an organization can get acquainted with the available solution. Its use is then limited to a select group of users, who can implement the company's methods within the application. After the application has proven its worth, the application can then be implemented further in the organization.

How to proceed?

For further information you can go to the Internet site www.metaware.nl. Here you can download demonstration software or start with an on-line demo.
